R<sup>2</sup> = Coefficient of determination.

F-Statistic = Obtained statistic for the F value.

**Where:**

Dummy(age) = 1 for each age and 0 otherwise.

Rho(age) = Autocorrelation coefficient for each age.

LNURM = Log unemployment rate.

LNCPIMA = Log of four-period weighted average of per capita real disposable income.

NOTE: The regression method used to estimate the full-time and part-time equations was pooled least squares with first-order autocorrelation correction.

The time period used to estimate the equations is from 1975 to 2000. The number of observations is 286. For additional information, see
